PYTHON WORKSHEET 3

```
1. Which of the following will raise a value error in python?
int(3.2)
2. What will be the output of round(3.567)?
C) 4
3. How is the function pow(a,b,c) evaluated in python?
B) (a**b)%c
4. What will be the output of print(type(type(int))) in python 3?
A) <class 'type'>
5. What will be the output of ord(chr(65))?
C) 65
6. What is called when a function is defined inside a class?
D) Method
7. What will be the output of all([1, 0, 5, 7])?
B) False
8. Is the output of the function abs() the same as that of the function math.fabs()?
B) Sometimes
9. Select all correct float numbers in python?
A) -68.7e100 B) 42e3
C) 4.2038 D) 3.0
10. Which of the following is(are) correct statement(s) in python?
A) You can pass positional arguments in any order.
```

11. Write a python function print pyramid of stars. Level of the pyramid should be taken as an input from the user. E.g. Input = 5

```
In [3]:

def print_pyramid(level):
    for i in range(1, level+1):
        print(" "*(level-i) + "* "*(i))
```

B) You can pass keyword arguments in any order.

C) You can call a function with positional and keyword arguments.

In [4]:

```
print_pyramid(5)

    *
    **
    **
    ***
    ***
    ****
```

12. Write a python function print Hourglass pattern. E.g. Input = 5

In [5]:

```
def print_hourglass(size):
    for i in range(size, 0, -1):
        print(" "*(size-i) + "* "*(i))
    for i in range(2, size+1):
        print(" "*(size-i) + "* "*(i))
```

In [6]:

```
print_hourglass(5)
```

```
* * * * *

* * * *

* *

* *

* * *

* * * *
```

13. Write a python function to print Pascal's Triangle. The number of levels in the triangle must be taken as input by the user. E.g. Input = 5

In [7]:

```
def print_pascal_triangle(levels):
    triangle = [[1]]
    for i in range(1, levels):
        row = [1]
        for j in range(1, i):
            row.append(triangle[i-1][j-1] + triangle[i-1][j])
        row.append(1)
        triangle.append(row)
    max_val = triangle[-1][-1]
    digits = len(str(max_val))
    for row in triangle:
        row_str = ""
        for val in row:
            val_str = str(val).center(digits, " ")
            row str += val str + " "
        print(row_str.center(levels*digits, " "))
```

In [8]:

```
print_pascal_triangle(5)

1
1 1
1 2 1
1 3 3 1
1 4 6 4 1
```

14. Write a python function to print Diamond Shaped Pattern shown below. Function must take integer input which represents the number of stars in the middle most line. E.g.: Input = 5

In [10]:

```
def print_diamond(num_stars):
    # Upper half of diamond
    for i in range(num_stars):
        # Spaces before stars
        print(" "*(num_stars-i-1), end="")
        # Stars
        print("*"*(2*i+1))

# Lower half of diamond
for i in range(num_stars-2, -1, -1):
        # Spaces before stars
        print(" "*(num_stars-i-1), end="")
        # Stars
        print("*"*(2*i+1))
```

```
In [11]:
```

```
print_diamond(5)

*

15. Write a python function to print Diamond Shaped Character Pattern shown below. Function must take integer input within range 1 to 26, which represents the rank of the alphabet. E.g.: Input = 5

```
In [12]:
```

```
def print_diamond_char(rank):
    # Convert rank to uppercase letter
    letter = chr(rank + 64)

# Upper half of diamond
    for i in range(rank):
        # Spaces before letters
        print(" "*(rank-i-1), end="")
        # Letters
        print(letter*(2*i+1))

# Lower half of diamond
    for i in range(rank-2, -1, -1):
        # Spaces before letters
        print(" "*(rank-i-1), end="")
        # Letters
        print(letter*(2*i+1))
```
